

ABSTRACT

Chloramine -T has been used as a biocide for over one hundred years.

Chloramine- T is also useful as a stain removal agent. This invention is concerned with a process whereby stains on a variety of substrates may be removed by treating a stained area of a substrate with a solution of Chloramine- T. In one embodiment a stained substrate is sprayed with a solution of Chloramine- T. The stained area may also be treated with a slurry or paste of Chloramine- T in order to effect stain removal. Solutions of Chloramine -T have the ability to remove undesirable stains without adversely affecting the substrate i.e. a piece of clothing.
